

Glue-Up

for Direct Surface Mount Application

The Classic Tin Styles are available for Glue-Up application that allows you to choose a recommended adhesive and apply to a variety of surfaces. Panel materials are designed for use in interior areas not directly exposed to sunlight and where temperatures do not exceed 140°F (60°C).

Adding visual interest to your ceilings has never been easier!

Step 1 – Choose a style that reflects your personal taste. ACP's attractive, highly durable panels offer a custom look without the custom expense.

Step 2 – Select a finish to complement any décor—from Bermuda Bronze to Copper Fantasy. Or select Paintable White and customize your own color finish to perfectly match your space.

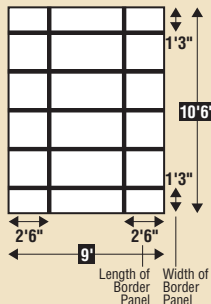

Room Planning – Use the calculations below to determine the quantity of panels needed, as well as the room layout. The room should be balanced to ensure panels are centered in the room and border panels are of the same dimensions. Large indentations in styles like Traditional 3 & 5, Art Deco, and Rosette prevent them from being cut in the middle and resting properly at border areas. Accordingly, these styles look best when Border Fill is used on the perimeter of the room (see the Lay-In page). The remaining Classic styles look best when full-size style panels are cut for the border (not Border Fill panels). If the existing border panel width is less than 12", two border panels can be cut out of one full-sized panel.

of whole panels _____

of border panels > 12" _____

of border panels < 12" (divide # by 2) _____

Total panels required _____

Determine Panel Layout

- Determine length of border panels.
- Determine width of border panels.

For best appearance, border panels should be the same size on the opposite sides of the room. Use your room dimensions and follow the formula in the worksheets at right.

Sample Worksheets, using 2' x 4' panels in a 9' x 10'6" room.

Determine Length of Border Panels

- Divide width of room by length of single panel $\frac{9}{4'9"} = 2 \frac{8}{9}$
- Add the remainder to length of single panel $2 \frac{8}{9} + \frac{4}{9} = 2 \frac{12}{9} = 2 \frac{4}{3}$
- Divide it by 2 $2 \frac{4}{3} \div 2 = 1 \frac{2}{3}$

Length of the Border Panels is 2'6"

Determine Width of Border Panels

- Divide length of room by width of single panel $\frac{10'6"}{2'} = 5 \frac{10}{2} = 5 \frac{5}{1}$
- Add the remainder to width of single panel $5 \frac{5}{1} + \frac{2}{1} = 5 \frac{7}{1} = 5 \frac{7}{1}$
- Divide it by 2 $5 \frac{7}{1} \div 2 = 2 \frac{7}{2} = 2 \frac{3}{2} = 2 \frac{1}{2}$

Width of the Border Panels is 1'3"

*use 4' for 2'x4' panel

*use 2' for 2'x4' panel

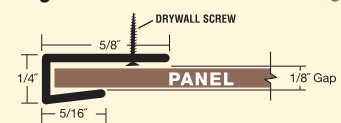

Step 3 – Choose Border Fill panels if needed. Use with Traditional 3 & 5, Art Deco, and Rosette styles when less than full panels are needed.

Step 4 – Choose matching Edge J-Trim, if needed. Edge J-Trim simply slides into place to finish off exposed edges and can be used along any cut edge.

Glue-Up panels are easy to install. For installation you'll only need a few basic tools and FRP adhesive. Complete installation instructions are included with your order, and can be found online at www.acpideas.com.
